STACK RAILS THEME

The StackDash admin theme features over 35+ apps & pages built using various html components. All the components in this dashboard theme can be customized through their HTML, SASS and JS source files.

INSTALATION

1. Copy all files and folders from the /app to your rails app/ folder
2. Update your Rails Application's package.json with the dependencies listed in package.json
3. Run "npm install" to install all dependencies.
4. Add in config/routes.rb: get 'stack/:page' => 'stack#show', as: 'stack'
5. Rename application.css to .scss and remove require_tree and require_self
6. Include scss applciation.scss "@import 'stack/application';"
7. Make sure you have root_path in routes.rb
8. Add "//= link application.js" to app/assets/config/manifest.js (Rails 5+)
9. Done.
